Skeletal Muscle (%)	32.3%	21.2~26
Bone Mass Percentage	3.9%	2.6~3.2
Protein Percentage	10.6%	7.5~9.1
Body Water Percentage	41.3%	27.8~34
SMI	11.3	7~8.6
Waist-Hip Ratio	1.3	<=0.9

Analysis and Advice

Muscles are well-developed, but fat and water content are slightly high, which may increase pressure on the kidneys and circulatory system. It is recommended to continue strength training and incorporate moderate-intensity aerobic exercises such as cycling, swimming, or treadmill running. In terms of diet, reduce intake of processed snacks, burgers, and high-salt seasonings, maintain adequate protein intake, and opt for chicken breast, turkey meat, and legumes. Drink water moderately, avoid consuming large amounts of water at once after exercising, and instead switch to small, frequent amounts.
